AI Lunch Questions:

## How Leaders Can Talk With Developers, DBAs, and PMs

Use these questions to align on AI strategy, avoid misunderstandings, and unlock internal innovation.

Executives (CIOs, CTOs, etc.)

Ask your developers:

Q "Where do you think AI could help us first without disrupting stability?"

Q "What systems are most AI-friendly as-is?"

Q "What's technically hard about some of the AI ideas we've discussed in leadership?"

Developers

Ask your business leaders:

Q "What pain points are you hearing from users that AI might help with?"

Q "What kinds of decisions do you wish could be automated or augmented?"

Q "Where do you see us needing AI explainability or transparency?"

DBAs & Data Teams

Ask the whole team:

Q "What data do we already collect that's underused?"

Q "Are we storing this data in ways that support AI use?"

Q "How can we keep sensitive data secure while experimenting?"

Project Managers

Ask stakeholders:

Q "Where can we pilot AI in small, low-risk ways?"

Q "How would an AI project fit into our current roadmap?"

Q "What business outcome should we tie an AI pilot to?"

Your team isn't behind. They're ready.
